BSc (Hons) Cyber Security

Contents

Overview

Awarding institution	Bath Spa University
Teaching institution	Bath Spa University
School	Bath School of Design
Department	Cyber Security
Main campus	Newton Park
Other sites of delivery	Future Education World
Other Schools involved in delivery	n/a
Name of award(s)	Cyber Security
Qualification (final award)	BSc (Hons)
Intermediate awards available	Diploma of Higher Education Certificate of Higher Education
Routes available	Single Honours

Sandwich year	Yes
Duration of award	3 years full-time (4 years with Professional Placement Year) 6 years part time
Modes of delivery offered	Campus-based
Regulatory Scheme[1]	Undergraduate Academic Framework
Exemptions from regulations/framework[2]	n/a
Professional, Statutory and Regulatory Body accreditation	n/a
Date of most recent PSRB approval (month and year)	n/a
Renewal of PSRB approval due (month and year)	n/a
UCAS code	CS01 CS02 (with professional placement year)
Route code (SITS)	CYSSIN CYSSIN (with professional placement year)
Relevant QAA Subject Benchmark Statements (including date of publication)	Computing (October 2019)
Date of most recent approval	31 March 2021
Date specification last updated	June 2023

[1] This should also be read in conjunction with the University's Qualifications Framework

[2] See section on 'Exemptions'

Exemptions

There are no exemptions.

Programme Overview

BSc (Hons) Cyber Security prepares you to meet the evolving challenges of protecting the digital systems and services we rely on in daily life, as well as responding effectively to instances where their vulnerabilities are exploited by threat actors. You learn through a blend of theory and practical work that cuts across knowledge in computing and cyber security, that engages tools and techniques employed in industry, and is supported by interaction with real-world business scenarios. Across the course you are exposed to many aspects of cyber security, from key professional roles and their remits, through network design and administration, to the nuances of establishing robust strategies for organisational cyber resilience. The aim of BSc (Hons) Cyber Security is to support a holistic understanding of the subject, therefore facilitating access to a wide range of professional careers in the field.

Module content targets the following themes:

- Software development
- Analytical thinking
- Problem solving
- Network design and administration
- Intrusion detection and response
- Digital forensics
- Offensive and defensive cyber operations
- Cyber resilience
- Governance, risk and compliance

Themes are engaged via a learning path that establishes core computing skills in year 1, expands your understanding into specialist areas of cyber security in year 2, and broadens in year 3 to support greater awareness of the context in which cyber security issues permeate society. Through a range of learning activities and applied teaching methods, you gain a balanced apprehension of the systems under threat, and practical knowledge of the tools, frameworks and procedures that assist their defence.

Year 1 introduces the fundamental concepts and skills that underpin computing and cyber security, including programming, system design and development, and digital forensics.

Year 2 builds on the computing theme with an increased emphasis on the security concepts, tools and techniques that are deployed to protect digital systems. Modules cover practical security considerations such as defense through secure network design, intrusion detection, and strategies for enhancing organisational cyber resilience.

Year 3 comprises specialist modules that deepen your understanding of the challenges and operational practices of cyber security. Modules include those that examine vulnerability

assessment methodologies such as red teaming, strategies for protecting critical national infrastructure, and the law, regulations and ethical concerns that underpin the field.

Programme Aims

1. Knowledge – to support an applied understanding of critical concepts, principles and practices within the field of cyber security.
2. Context - to cultivate a deep appreciation of the relevance of cyber security in society and improve the understanding of secure design and secure development in the computer industry.
3. Computational Thinking – to develop individuals that have a capacity to analyse complex cyber security problems and propose holistic solutions that rely on the application of computing, and that are informed by human, technical and process considerations.
4. Critical Thinking – to develop students that can critically evaluate cyber security knowledge in wider context and apply it in personal, business and public sector contexts.
5. Practice – to assist students in establishing and maintaining risk assessment and management strategies that meet a range of cyber security and critical vulnerability challenges.
6. Ethics - to outline the complexities of ethical practice in cyber security, and encourage students to reflect critically on the human consequences of their practices, behaviours and approaches to decision-making in the field.
7. Employability – to embed industry-insight and professional development opportunities across the programme to ensure that students are prepared for roles in the cyber security sector.

Programme Intended Learning Outcomes (ILOs)

A Subject-Specific Skills and Knowledge

	Programme Intended Learning Outcomes (ILOs) **On Achieving Level 6**	**On Achieving Level 5**	**On Achieving Level 4**

A1	Sector Context – Systematic understanding of current developments in the cyber security sector, and the ability to identify and critically evaluate emerging challenges, practices and technologies in the field.	Sector Context – An applied understanding, and ability to critically evaluate, the operational mandate of a specialist role within the cyber security sector.	Sector Context – Knowledge of the core objectives of the cyber security sector and its key professional roles.
A2	of cyber security law and regulation, and the ability to critically examine the legal and ethical implications of decisions in cyber security, including instances that present moral conflict.	Law, Regulation and Ethics - the ability to critically evaluate the legal and regulatory underpinnings and ethical dimension of key professional roles in the field of cyber security.	Law, Regulation and Ethics - Knowledge of key laws, regulation and ethical concerns in the field of cyber security.
A3	Systems – The ability to systematically evaluate business security architectures and their component systems to identify potential vulnerabilities and propose modifications that enhance cyber resilience.	Systems – An applied understanding of the design and implementation methods of computing and cyber security systems.	Systems – Knowledge of the key functions, features and design considerations of computing and cyber security systems.
A4	Tools – The ability to critically evaluate, select and deploy in a systematic manner specialist tools as required to address a problem in the field of cyber security.	Tools – The ability to critically evaluate and apply established computing and cyber security tools.	Tools – Knowledge of the function, benefits and limitations of core computing and cyber security tools.
A5	Threat Analysis - Systematic knowledge and the ability to critically evaluate current and emerging threat vectors and their associated threat actor motivators and geopolitical factors.	Threat Analysis - The ability to critically evaluate and apply sector-standard methods of detecting and analyising a range of threat vectors.	Threat Analysis - Knowledge of routine threat vectors, the core objectives of threat actors, and the human factors that contribute to data breaches.
A6	Incident handling - The ability to critically evaluate, implement and adapt specialist methodologies in the field of cyber security for preventive action and post-incident response.	Incident handling - The ability to critically evaluate and apply sector-standard methods of responding and recovering from network intrusions.	Incident handling - Knowledge of the core objectives and investigative procedures of digital forensics.

A7	Reporting - The ability to select, critically evaluate, implement and adapt strategies for reporting the outcomes of a specialist task in the field of cyber security.	Reporting - The ability to critically evaluate and apply established and evidence-based approaches to reporting the outcome of a routine task in the field of cyber security.	Reporting - Knowledge of key methods of reporting the outcomes of a computing task.

B Cognitive and Intellectual Skills

	Programme Intended Learning Outcomes (ILOs) **On Achieving Level 6**	**On Achieving Level 5**	**On Achieving Level 4**
B1	Knowledge – Systematic knowledge of, and the ability to critically evaluate established and emerging concepts, practices and terms in the field of cyber security.	Knowledge – Critical understanding of established concepts, principles and terms in the field of cyber security.	Knowledge – Knowledge of the fundamental concepts, principles and terms that underpin the field of cyber security.
B2	Computational Thinking – The ability to critically evaluate and apply methods of deconstructing abstract problems and proposing solutions that are efficient and generalisable.	Computational Thinking – The ability to apply established frameworks for computational thinking to represent a complex problem appropriately and reduce it to a series of ordered, solvable steps.	Computational Thinking – The ability to express a defined problem as a series of small and solvable steps.
B3	Critical Thinking – The ability to collect, analyse, generate where required, and synthesise sources of information and data in order to address an abstract problem in the field of cyber security.	Critical Thinking – The ability to identify sources of information and data that are relevant to a particular problem domain, then critically evaluate and apply methods of analysis to generate insights.	Critical Thinking – Knowledge of key methods used in computing and cyber security to analyse and extract insights from a source of information.

B4	Collaboration - A systematic understanding of collaborative strategies in the field of cyber security and its value in diversifying expertise, enhancing real-time visibility and cultivating cross-sector relationships.	Collaboration - Critical understanding of, and the ability to apply, collaborative practice to address challenges in the field of cyber security.	Collaboration - Awareness of key methods of collaboration in the field of cyber security, and the rationale for sharing information between stakeholders.

C Skills for Life and Work

	Programme Intended Learning Outcomes (ILOs) **On Achieving Level 6**	**On Achieving Level 5**	**On Achieving Level 4**
C1	Autonomous learning[3] (including time management) that shows the exercise of initiative and personal responsibility and enables decision-making in complex and unpredictable contexts.	Autonomous learning (including time management) as would be necessary for employment requiring the exercise of personal responsibility and decision-making such that significant responsibility within organisations could be assumed.	Autonomous learning (including time management) as would be necessary for employment requiring the exercise of personal responsibility.
C2	Team working skills necessary to flourish in the global workplace with an ability both to work in and lead teams effectively.	Team work as would be necessary for employment requiring the exercise of personal responsibility and decision-making for effective work with others such that significant responsibility within organisations could be assumed.	Team work as would be necessary for employment requiring the exercise of personal responsibility for effective work with others.

C3	Communication skills that ensure information, ideas, problems and solutions are communicated effectively and clearly to both specialist and non-specialist audiences.	Communication skills commensurate with the effective communication of information, arguments and analysis in a variety of forms to specialist and non-specialist audiences in which key techniques of the discipline are deployed effectively.	Communication skills that demonstrate an ability to communicate outcomes accurately and reliably and with structured and coherent arguments.
C4	IT skills and digital literacy that demonstrate core competences and are commensurate with an ability to work at the interface of creativity and new technologies.	IT skills and digital literacy that demonstrate the development of existing skills and the acquisition of new competences.	IT skills and digital literacy that provide a platform from which further training can be undertaken to enable development of new skills within a structured and managed environment.

[3] i.e. the ability to review, direct and manage one's own workload

Programme content

This programme comprises the following modules

Key:

Core = C

Required = R

Required* = R*

Optional = O

Not available for this status = N/A

If a particular status is greyed out, it is not offered for this programme.

Subject offered as single and/or combined award

If a particular status is greyed out, it is not offered for this programme.

BSc (Hons) Cyber Security				Status	
Level	Code	Title	Credits	Single	Joint
4	CYS4000-20	Fundamentals of Cyber Security	20	C	
4	CPU4006-20	CodeLab I	20	C	
4	CPU4002-20	Introduction to Computing	20	C	
4	CYS4001-20	Digital Forensics	20	C	
4	CPU4005-20	Databases	20	C	
4	CCO4007-20	Web Dev I	20	C	
5	CYS5000-20	Network Administration	20	C	
5	CPU5004-20	CodeLab II	20	C	
5	CPU5002-20	Databases	20	C	
5	CYS5001-20	Intrusion Analysis and Response	20	C	
5	CYS5002-20	Cyber Resilience	20	C	
5	CCO5104-20	Web Dev II	20	O	
5	PPY5100-120	Professional Placement Year	120	O	
6	CYS6000-20	Cyber Crime, Law and Ethics	20	C	
6	CYS6001-20	Research Project	20	C	
6	CYS6002-20	Securing the Internet of Things	20	O	
6	CYS6003-20	Cyber Offence	20	C	
6	CYS6004-20	Cyber Defence	20	C	
6	CYS6005-20	Critical Infrastructure	20	C	

Assessment methods

A range of summative assessment tasks will be used to test the Intended Learning Outcomes in each module. These are indicated in the attached assessment map which shows which tasks are used in which modules.

Students will be supported in their development towards summative assessment by appropriate formative exercises.

Please note: if you choose an optional module from outside this programme, you may be required to undertake a summative assessment task that does not appear in the assessment grid here in order to pass that module.

Work experience and placement opportunities

There are several opportunities to engage with industry across BSc (Hons) Cyber Security. We encourage you to take advantage of:

- Summer placement schemes
- Live briefs and industry pitching opportunities within modules
- Analytical and technical work as part of Cyber Security commissioned projects
- Roles within university-led external projects
- Invites to attend or participate in external networking opportunities, IT meetups and subject industry-insight events

BSc Cyber Security can also include a Professional Placement Year. The placement year is completed between years 2 and 3 of your degree and counts for 120 Level 5 credits. During this time you will be able to utilise knowledge gained as part of your studies in a real work environment to gain ‘hands on’ experience. The university has a dedicated Careers & Employability team to help you find and prepare for a placement. Following your placement year, you will return to University to complete your final year of study.

Opportunities to study abroad via International Exchange and Study Abroad programmes are also available.

Graduate Attributes

	Bath Spa Graduates…	In BSc (Hons) Cyber Security, we enable this by…
1	Will be employable: equipped with the skills necessary to flourish in the global workplace, able to work in and lead teams	Approaching cyber security from a holistic perspective to encourage interaction with multiple aspects of the field, and their respective professional roles.
2	Will be able to understand and manage complexity, diversity and change	Exposing the rate at which computing and cyber security move as applied subjects, and assisting students to establish strategies for maintaining pace.
3	Will be creative: able to innovate and to solve problems by working across disciplines as professional or artistic practitioners	Helping students establish computational thinking and analytical thinking skills to support the application of their technical skills.
4	Will be digitally literate: able to work at the interface of creativity and technology	Recognising the inseparable connection between computing and cyber security, and teaching not only specific applied skills required by employers but also the technical foundations of these subjects.
5	Will be internationally networked: either by studying abroad for part of the their programme, or studying alongside students from overseas	Engaging cyber security as an international concern, and by seeking and facilitating opportunities for knowledge exchange with specialist speakers and learners located outside of the UK.
6	Will be creative thinkers, doers and makers	Assisting students in developing the innovative mindset needed to contribute to efforts that will drive the cyber sector forward.
7	Will be critical thinkers: able to express their ideas in written and oral form, and possessing information literacy	Facilitating critical engagement with a range of credible sources and perspectives in the cyber security sector, and ensuring methods of assessment cover multiple forms of communication, with each having a specific function in the field.
8	Will be ethically aware: prepared for citizenship in a local, national and global context	Embedding in the course multiple points of interaction with the ethical dimension of cyber security, including instances of tension between the values of society and the operational needs of organisations.

Appendix 3: Map of Summative Assessment Tasks by Module

Please indicate in the relevant boxes which summative assessment methods are used in each module and, where appropriate, the assessment length. Please delete or add columns and/or rows as necessary. An illustrative example, which should be deleted, is provided in the first line. The titles ‘Coursework’, ‘Practical’ and ‘Examination’ are the headings under which the University is required to return data for the Key Information Set (KIS) and should not be changed. The specific headings under those are the ones given in the KIS guidance issued to Schools by Student Services; please amend them as necessary to fit the summative assessment diet on this programme and the most appropriate of the KIS data headings.

Appendix 4: Module Descriptors

To insert a module descriptor, create a new page within the 'Module Descriptors' parent page for the year that this module will be available and insert the module descriptor template. Once the module descriptor is complete, you can insert it into this DPD via the macro 'Include Page'. Any edits or changes that need to be made to the module descriptor must be done through the individual module descriptor page within 'Module Descriptors (year)'.
